

PROBST VTK BLOCK CART

£660.00

For the effortless transportation of bound or loose pavers, kerb stones, slabs, etc.

* Clamping is done by bending a lever 90° (maximum pressure 15 kp).

* An integral protection device prevents overloading of the clamping mechanism.

* A favourable load distribution and the light-weight-nature of the device (68 kg) ensures optimal operating.

* Its narrow build (115 cm/45") means it can be used on the smallest building sites.
